TO WHOM IT MAY CONCERN,

Participating in innovative world with technology has always thrived me to develop my personal career. As a fourth semester student of Software Engineering program at Via University College, I am thrilled to apply for the software engineer position in your company as an Intern in August. I believe that being part of your team would push me even further while gaining new experience and knowledge.

During my studies at VIA University College, I worked with different technologies which I applied into my assignments and different group projects which were successfully developed. Group projects were applying various methodologies, especially SCRUM or Kanban. In the past two years I focused both on the front-end and back-end development using different languages such as Java, C#, JavaScript, relational database – SQL and HTML/CSS as well as UI/UX principles. In addition, I also have experience with web service technologies such as REST, SOAP and .NET framework.

In my spare time, I am actively gaining knowledge from online courses and I enjoy finding new innovative solutions. I am very open-minded, determined and ambitious person who loves to solve any challenges and become more skilled every day. As mentioned before, I am very open to teamwork as I managed to cooperate with my groupmates perfectly. I see this internship as a huge chance to evolve my personal career as well as professional one. I would be delighted to join your team and assist you throughout the whole period.

In the links above, I am attaching my contact information as well as Github and LinkedIn profile. Thank you for reviewing my application and I look forward to hearing from you.

Yours Faithfully,

Lenka Orincakova
